```c
#include <stdio.h>
#include <string.h>
#include <ctype.h>
int main() {
   char text[100];
   int k, i;
   printf("Enter plaintext: ");
   fgets(text, sizeof(text), stdin);
   printf("Enter shift (1-25): ");
   scanf("%d", &k);
   k = ((k % 26) + 26) % 26;
   for (i = 0; text[i] != '\0'; i++) {
      if (isupper((unsigned char)text[i])) {
         text[i] = (text[i] - 'A' + k) % 26 + 'A';
      } else if (islower((unsigned char)text[i])) {
         text[i] = (text[i] - 'a' + k) % 26 + 'a';
      }
   }
   printf("Ciphertext: %s", text);
   return 0;
}
```
